Together with technical specialists from Beijing Green the first TOXcontrol was installed in the People's Republic of China. Beijing Green is the official distributor for the TOXcontrol in China.

The TOXcontrol On-line Biomonitor was installed at the water intake facility of a drinking Water production facility in the South of China. At this station water is taken in from the river and afterwards treated for drinking water production.

The TOXcontrol will be used to monitor the intake of raw water. The drinking water Company decided to select the TOXcontrol for this purpose after their experiences with the SDI DeltaTox system, a portable field instrument using the same *Vibrio fischeri* as the TOXcontrol.

Specialist from Beijing Green (see picture on the left) where recently trained at the facility of microLAN in the Netherlands to provide onsite service and customer support for the TOXcontrol.

Beijing Green expects to expand the number of installation throughout China in the next years.
