## High visits during Aquatech India for microLAN BV

During the Aquatech India, organised in New Delhi, microLAN received some very high visitors interested in the innovative monitoring techniques used in the TOXcontrol. On February the 4<sup>th</sup> the Director-General for Entrepreneurship and Innovation from the Ministry of Economic Affairs Mrs. R. Bergkamp and the Director for Innovation from the Agentschap NL (formerly SenterNovem) Mr. W. Zwolve, visited the booth from microLAN which was located at the Netherlands Water Platform.

They were very interested in the clean and green technique, used by microLAN in the TOXcontrol for on-line water quality monitoring techniques and asked many questions about the developments of the company and its products. Both assured that they would bring this new techniques to the attention of the Indian authorities during their next meetings.
