Water Quality Monitoring Developments in China

On Friday June 4th microLAN organized a very well organized workshop which was attended by about 100 people mainly from Chinese Water Companies and EPA's. The workshop was supported by the Province of Friesland and Vice Governor Sjoerd Galema opened the program with a welcome speech

Several presentations about toxicity monitoring (using the TOXcontrol) and other new innovations showed that the level of water quality monitoring experiences is reaching very high levels. The organizers would like to thank also the City of Leeuwarden and Beijing Green, the microLAN Distributor for clean water applications in China.
